

Wolfpack Apex

Infrastructure & Cost Report

Prepared for: Hoxsie, CEO

Prepared by: Nick Homyk, CTO

Date: April 6, 2026

Executive Summary

Wolfpack Apex is our team intelligence platform providing AI-powered assistance, knowledge management, reporting, analytics, and internal collaboration for the entire Wolfpack Agency team.

\$125 - \$135/mo

Total monthly cost for all 5 team members

\$25-27

Cost per team member/month

\$1,500-1,620

Estimated annual cost

6 of 8

Services on free tier

What Every Team Member Gets

Wolfpack Assistant

AI-powered Q&A that learns from every interaction

Knowledge Base

Searchable team knowledge that grows over time

Reports

Branded client reports, proposals, and audits

Discussions

Threaded conversations with resolution tracking

Feature Requests

Submit ideas, vote, and track development

Journal

Team activity log and daily context

Client Management

Client profiles and communication tracking

Email Templates

Professional client emails generated instantly

Analytics

Usage insights, activity, and AI efficiency

Monthly Cost Breakdown

1. AI & Development Tools

SERVICE	WHAT IT DOES	PLAN	MONTHLY
Claude Max	Nick's development tool (IDE, Claude Code)	Max 5x Personal	\$100.00
Claude API	Powers the Wolfpack Assistant for all 5 team members	Pay-as-you-go	\$5.00 - \$15.00

The Claude API cost scales with usage. At current estimates (each team member asking ~20 questions/day), the cost stays under \$15/month. The assistant caches answers over time, meaning repeated questions cost nothing.

2. Hosting & Deployment

SERVICE	WHAT IT DOES	PLAN	MONTHLY
Vercel	Hosts the Apex web application	Pro (1 seat)	\$20.00

All team members access Apex through the browser. Only the builder (Nick) needs a paid Vercel seat. Dashboard viewers are free.

3. Databases & Storage

SERVICE	WHAT IT DOES	PLAN	MONTHLY
Neon PostgreSQL	Primary database: team data, conversations, knowledge, analytics	Free	\$0.00
Qdrant Cloud	Vector database: smart search and knowledge matching	Free	\$0.00
Neo4j AuraDB	Graph database: maps relationships between team knowledge	Free	\$0.00

All three databases offer production-ready free tiers that comfortably handle a team of 5. Neon provides 0.5 GB storage, Qdrant provides 1 GB for ~500K knowledge vectors, and Neo4j supports 50K nodes and 175K relationships.

4. Email & Monitoring

SERVICE	WHAT IT DOES	PLAN	MONTHLY
Resend	Email notifications and client communications	Free (3,000/month)	\$0.00
Sentry	Error monitoring and crash reporting	Free	\$0.00

Total Cost Summary

LINE ITEM	MONTHLY	ANNUAL
Claude Max (Nick's development)	\$100.00	\$1,200.00
Claude API (Team assistant)	\$5.00 - \$15.00	\$60.00 - \$180.00
Vercel Pro (Hosting)	\$20.00	\$240.00
Neon PostgreSQL	\$0.00	\$0.00
Qdrant Cloud	\$0.00	\$0.00
Neo4j AuraDB	\$0.00	\$0.00
Resend Email	\$0.00	\$0.00
Sentry Monitoring	\$0.00	\$0.00
Total	\$125.00 - \$135.00	\$1,500.00 - \$1,620.00

What's NOT needed (zero cost):

- Individual Claude subscriptions for team members (they use the assistant through Apex)
- Separate chat tools or Slack subscriptions
- Additional hosting seats (dashboard viewers are free)
- Custom domain SSL certificates (automatic through Vercel)

Future Scaling Costs

None of the following are expected in the near term with a 5-person team:

TRIGGER	WHAT CHANGES	ADDED COST
Database exceeds 0.5 GB	Upgrade Neon to Launch plan	+\$19/month
Over 3,000 emails/month	Upgrade Resend to Pro	+\$20/month
Custom email domain (@thewolfpack.agency)	Resend Pro	+\$20/month

Heavy AI usage (100+ questions/day)	API costs scale automatically	~\$30-50/month
Additional builders needing deploy access	Add Vercel Pro seats	+\$20/month per seat

Steps to Go Live

All code is built and tested (359 passing tests). Going live requires only configuration:

- 1 Set environment variables in Vercel dashboard (API keys, database URLs)
- 2 Run database migrations (one command)
- 3 Create production user accounts for each team member

Estimated time to production: under 1 hour.
